**ANTHROPOLOGY:**

Anthropology examines the complexity and diversity of human experience, past and present, through evolutionary, archaeological, social, cultural, and linguistic perspectives. As such, Anthropology is a truly interdisciplinary venture that spans the natural sciences, social sciences, and humanities. This broad mandate has led to the division of the discipline into three broad areas of research: Archaeology; Evolutionary Anthropology; and the study of Society, Culture and Language.

Archaeologists study the material remains of the human past. Archaeological methods range widely, from the study of artifacts to the analysis of plant and animal remains, and Archaeological research covers a vast expanse of time from the earliest stone tools to the complex record left by modern industrial society. Archaeologists also grapple with a range of theoretical issues including material culture, culture change, identity, and ritual. Many archaeologists today also work in collaboration with local communities and engage with the questions of archaeological ethics.

Evolutionary Anthropology is the study of the biological diversity of humans, the history of this diversity, and the biological relationships between humans and non-human primates. Major foci in Evolutionary Anthropology include Human Biology, the study of modern humans; Osteology, the study of the human skeleton; Paleoanthropology, the study of human evolution; and Primatology, the study of non-human primates. Evolutionary anthropologists integrate biological and social variables in their explanations of the effects of evolution on humans and other primates.

At the core of the study of **Society, Culture and Language** is the question of how we humans organize our lives together, and why we do so in such vastly different ways. The orientation is global and contemporary. We explore social relations: relations between kin and neighbours, between genders and generations, between ethnic groups and nations, between rich and poor, between people and the natural environment that sustains them, and between people and their gods. We also explore the production and communication of meanings through rituals, images, memories, symbols and linguistic codes. Topics include environment, power, ideology, identity, subjectivity, media, sexuality, ethics, affect, activism, health, cities, work and international development.

The ANTHROPOLOGY STUDENTS’ ASSOCIATION (ASA) is the official student union for Anthropology undergraduates at the University of Toronto St. George. The ASA, which is governed by an executive board composed of annually elected undergraduate students, acts as a medium between the Department of Anthropology and Anthropology undergraduates by representing undergraduate students on a number of departmental boards and committees as well as to the department administration directly. The ASA’s main objective is to continuously improve the quality of the undergraduate experience for Anthropology undergraduates at the University of Toronto St. George.

The ASA houses many valuable resources for undergraduates, which include: a past test and syllabi database, student feedback on courses and instructors, information on anthropological and archaeological field-schools/projects, information on graduate programs, and more. The ASA awards an annual $250 scholarship to an undergraduate student wishing to conduct Anthropological/Archaeological research or fieldwork and also prints an annual journal of undergraduate papers in Anthropology and its sub disciplines.

The ASA also hosts a number of academic and entertainment events including: academic lecture seminars highlighting the research conducted by department professors and graduate students, a graduate school information seminar for undergraduates considering graduate studies, field-school information seminars, games nights, pub nights, an end-of-the-year semi-formal, and more.

The ASA encourages all Anthropology undergraduates and those interested in Anthropology to register with us. Registered members will receive our weekly newsletter and updates on ASA activities, and will be eligible for receiving additional resources from the ASA. More information on the ASA and how to register can be found on our website, Facebook group, and Twitter, and students are further encouraged to contact the ASA via email or phone, or by visiting the ASA office directly (see below).

The Archaeology Programs focus on the study of past human societies primarily through their material remains, or “material cultures”. Archaeologists explore the nature of and changes in past cultures around the world through survey, excavation and analyses of stone tools, pottery, bones, plant remains, architecture and other cultural residues. Some of the major research foci of archaeologists are the nature of hunter-gatherer technology and economy in the Pleistocene, the origins of agriculture, pastoralism, urbanism and politically complex states, the workings of ancient exchange systems, and the development of class-based and gender-based political and economic inequalities in complex societies. Working archaeologists often specialize geographically, chronologically or thematically. Classical archaeologists, for example, specialize in the cultures of the ancient Greco-Roman world, while paleoethnobotanists explore ways that botanical residues of ancient and prehistoric cultures can inform us about their economies and social systems. The specialist programs allow students to explore archaeology in a multidisciplinary setting.

Students in either specialist program should consult with the program coordinator or faculty members in their intended areas of specialization for advice on the selection of courses. Those intending to go on to graduate studies in Departments such as Fine Art History or Near and Middle Eastern Civilizations should pay particular attention to language requirements at the graduate level.

The Archaeology Specialist (Arts program) is designed for students in the Social Sciences or Humanities, who may be interested in such fields as prehistoric, Aegean, Classical, historical and Near and Middle Eastern archaeology. See details below. Students interested in pursuing graduate studies should combine it with study of the ancient and modern languages relevant to their primary area of interest.

The Archaeology Major (Arts program) is designed so that students learn archaeological methods, ethics, theory as well as practical skills most important in archaeology, and it may be combined with a program in Humanities or a program in the Sciences.
